Dear Hiring Manager,

I am excited to apply for the AI Enablement Specialist role at SAP, as my extensive experience in technical learning program design positions me well to drive AI enablement in your organization. With 26 years in engineering and consulting, I have built large-scale learning platforms that can effectively translate complex AI concepts into actionable insights for your teams.

At Atmel Corporation, I built and led the Atmel Academy, a global technical learning platform that served over 5,000 users across 40+ countries. This experience directly aligns with your need for someone who can design and deliver hands-on trainings and workshops. Additionally, my role as a Senior Systems Engineer at Brembo involved managing safety-critical systems, ensuring that I understand the rigorous standards required for AI integration in regulated environments.

My background in safety-critical systems engineering provides a unique perspective that is crucial for AI compliance and governance. As I transition into AI consulting, I aim to apply my rigorous understanding of system safety to ensure that AI implementations are both effective and compliant, framing my experience as an asset rather than a liability.

I look forward to the opportunity to discuss how my background and vision align with the goals of SAP. Please let me know a convenient time for us to connect.
